# PARTS ALIGNMENT

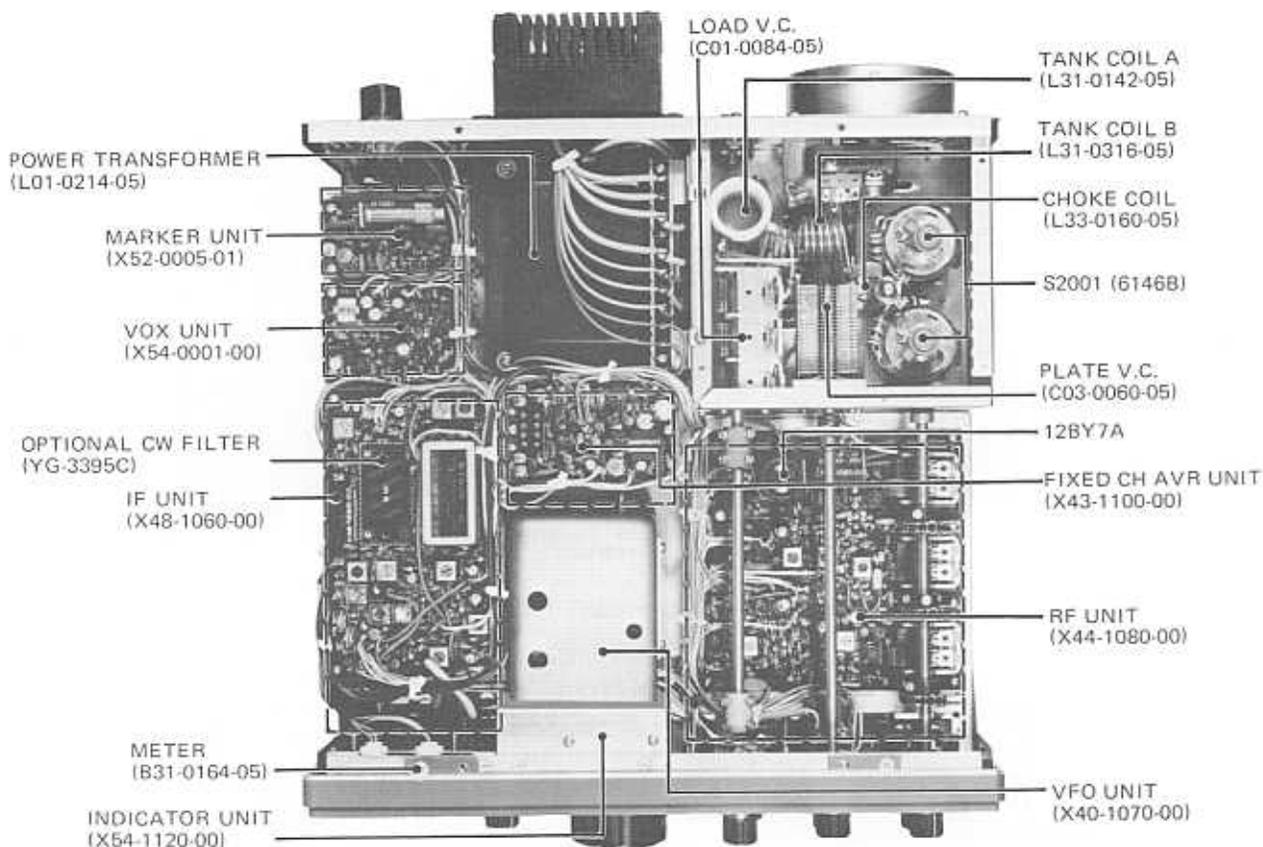

Figure 4. TS-520 TOP VIEW PARTS

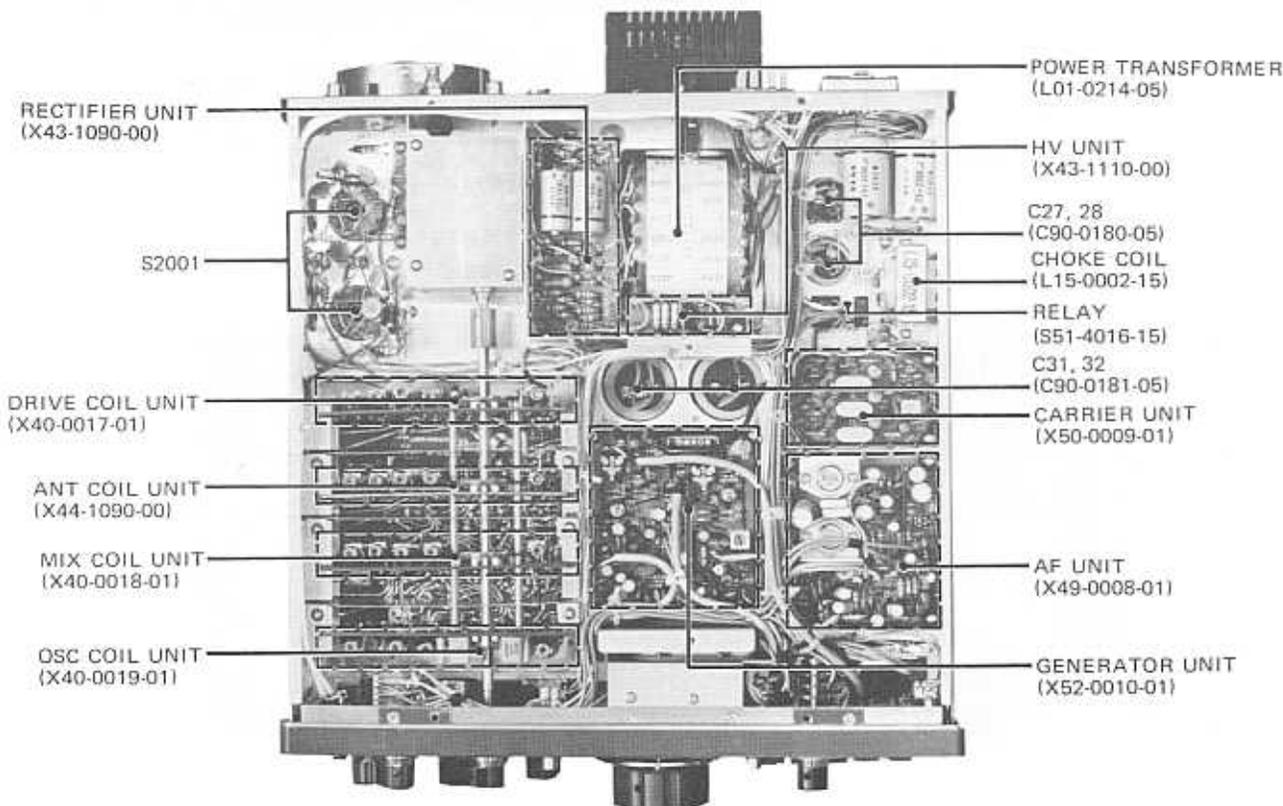

Figure 5. TS-520 BOTTOM VIEW PARTS

## SECTION 1. INTRODUCTION

Kenwood's TS-520 is a solid-state, amateur band single side band transceiver which uses only three vacuum tubes in the exciter and final stages. The TS-520 incorporates many sophisticated and modern features which make it a very useful transceiver. The information included in this service manual is intended to complement the technical data supplied in the operator's manual. For example the operator's manual includes pictorial parts displays, voltage tables, operating instructions, a troubleshooting chart, and the block diagram. This service manual includes technical service procedures, a parts list, circuit board layouts and full schematics. Together, the two publications provide full technical information.

## SECTION 2. TROUBLE-SHOOTING

The following table describes possible causes of different malfunctions which might occur when the transceiver is connected and operated as described in the operating

TS-520 was completely adjusted and inspected at the factory prior to shipment. The most common causes of service problems are shipping damage, improper operation, or component ageing. When shipping damage is the cause of trouble, check for loose connectors, disconnected wires, damaged or open circuits, or mechanical damage to relays, crystals, or other parts vulnerable to vibrations. When component ageing or improper operation is the cause of service problems, check for deteriorated or burned out parts. The troubleshooting table is useful for pin-pointing some problems.

Be certain to check in the operating manual for a detailed circuit description and the block diagram.

manual. When problems are caused by defective components, replace the part only with its exact replacement or a close equivalent.

### 2-1. RECEIVER SECTION

SYMPTOM	CAUSE	REMEDY
1. No power from power supply.	1. Blown fuse.	Replace the fuse with a fuse of the same value.
	2. Defective POWER switch.	Check and replace the switch.
	3. Defective power cord.	Check and replace the power cord.
2. Blown fuse.	1. Defective transistors on the AUDIO board - Q3 and/or Q4.	Check and replace the transistors.
	2. B + circuit shorted to chassis.	Locate and repair the short.
3. No noise can be heard from the speaker.	1. Defective speaker or disconnected speaker plug.	Check and replace or reattach the speaker.
	2. Defective transistors on the AUDIO board - Q3 and/or Q4.	Check and replace the defective transistors.
	3. PHONES or SPEAKER jack contacts are broken.	Check and replace the defective jack.
4. Noise, but no signals, can be heard from the speaker.	1. AF GAIN or RF GAIN controls are defective.	Check and replace the defective controls.
	2. TC1 on the CARRIER board requires tuning.	See Section 3.26.
	3. Defective diode switching on the CARRIER board.	Check and replace defective diodes.
		Check the continuity of the MODE switch.
	4. Output from the AVR board may be unregulated.	Check and repair the AVR board.
	5. EXT VFO jumper plug is not inserted.	Be certain this jumpered plug is in the socket.
6. FUNCTION switch is set to a fixed channel position.	Set the switch to the proper position.	

SYMPTOM	CAUSE	REMEDY	
	7. The coaxial VFO output cable is disconnected.	Reconnect the cable.	
	8. Defective transistor on the VFO board.	Check and repair the VFO board.	
	9. The coils on the OSC COIL board require tuning.	See Section 3-13.	
	10. A defective switch on the OSC COIL board.	Check and replace the switch wafer.	
	11. Q1 and/or Q2 on the RF board are defective.	Check and replace the defective transistors.	
	12. Q1, Q3, Q4 and/or Q9 on the IF board are defective.	Check and replace the defective transistors per Figure.	
	13. IF transformers T1, T2, T5, T6, and/or T9 may be misaligned or defective.	See Section 3-15.	
	14. Band pass filter requires alignment.	See Section 3-12.	
	15. Bias circuit on IF board not normal.	Check voltages at terminals RB, 14V and AGC.	
	16. Filter diode switch on IF board defective.	Check voltages and operation by Figure 14.	
	17. ANT or RF coils require alignment.	See Section 3-13.	
	18. Defective switch wafer in the RF section.	Check and replace the defective switch.	
	19. Disconnected coax on ANT board or at the 8.6 MHz trap.	Reconnect the coax.	
	20. Defective relay in the final section.	See Section 3-2.	
	21. Defective tuning capacitor.	Check the capacitor after disconnecting the leads at terminals MVC and DVC of the DRIVE board.	
	22. Defective Q4 and/or Q5 on the RF board.	Check the transistors per Figure.	
	23. Carrier unbalanced on GENERATOR board.	See Section 3-17.	
	5. S-meter does not read correctly.	1. Zero adjust VR1 on IF board requires calibration.	See Section 3-18.
		2. S-meter sensitivity adjust, VR2 on the IF board, requires calibration.	See Section 3-18.
		3. Defective AGC circuit (Q5 or Q6) on IF board.	Check the circuit and replace the defective transistors.
		4. Open circuit at L4, L6, or terminal RFC of the IF board.	Repair as necessary.
		5. Defective relay in final section.	Replace the relay.
	6. S-meter does not return to zero.	1. Reference voltage for RF1 on the FIX, AVR board requires adjustment.	See Section 3-18.
	2. Carrier requires balancing.	See Section 3-17.	
7. Calibrator inoperative.	1. Defective FUNCTION switch at wafer S2-4 on MARKER board.	Check continuity at terminal 9.	

SYMPTOM	CAUSE	REMEDY
	2. Coax cable disconnected from terminal MO on MARKER board.	Check the connection.
	3. Open circuit L1 on the MARKER board.	Check and repair the circuit.
	4. Defective Q1 on MARKER board.	Check and replace the defective transistor.
	5. Defective crystal on the MAKER board.	Replace the crystal.
8. No WWV reception.	1. Defective WWV switch, S9.	Check and replace the defective switch.
	2. Coil T3 on RF board misaligned.	See Section 3-14.
	3. Defective Q7 on the RF board.	Check and replace the defective transistor.
	4. Defective or misaligned T5 on the RF board.	Check and replace the defective coil.

## 2-2. TRANSMITTER SECTION

SYMPTOM	CAUSE	REMEDY
1. No output or low output.	1. Defective final tubes. S2001 (6146A)	Replace the tubes.
	2. Defective switch, S5, in final section.	Check and replace the defective switch.
	3. Defective relay in final section.	Check and replace the defective relay.
	4. Loading capacitor shorted.	Check the conduction of the capacitor and replace if defective.
	5. Carrier, VFO, or heterodyne oscillator boards may be defective.	See Sections 3-13, 3-21, or 3-26.
	6. Defective driver tube (12BY7A).	Replace the tube.
	7. Defective relay RL1 on GENERATOR board.	Check the conduction of the coil and contacts.
	8. Defective MODE switch wafer (S3-7) on GENERATOR board.	Check the continuity of the switch contacts.
	9. Defective Q4 on the GENERATOR board.	Check and replace the transistor.
	10. Defective MIC GAIN control.	Check and replace the defective control.
	11. SG switch is off or defective.	Check the continuity of the rear panel SG switch.
2. Output is normal but the meter shows no output.	1. The RF VOLT control is improper adjusted.	Adjust the RF VOLT control.
	2. Defective meter.	Check the meter and replace if necessary.
3. No ALC meter reading.	1. Q10 on RF board is defective.	Check and replace the transistor.
	2. Insufficient drive.	See Section 2-2-1.
	3. Shorted ALC circuit.	Trace the circuit and repair as necessary.
	4. Defective RL1.	Check and replace the defective relay.

SYMPTOM	CAUSE	REMEDY
4. No HV meter reading.	1. Defective components in power supply section.	Troubleshoot the power supply.
	2. Defective or disconnected meter circuit.	Troubleshoot the meter circuit.
5. Stand-by switch is inoperative.	1. Microphone wired incorrectly.	Rewire the MIC plug.
	2. Disconnected leads at terminal VS or SS on the VOX board.	Check the continuity of the leads.
	3. Q8 or D8 on VOX board defective.	Check and replace the defective parts.
	4. Defective stand-by switch.	Check and replace the defective switch.

## 2-3. OTHER CIRCUITS

SYMPTOM	CAUSE	REMEDY
1. 9 volt supply is not regulated.	1. Transistor or diode on AVR board defective.	Check and replace the defective part.
2. The noise blanket is ineffective.	1. NB board requires adjustment.	See Section 3-15.
	2. NB switch defective.	Check and replace the defective switch.
	3. Transistors Q1 through Q6 on the NB board are defective.	Check the voltages and replace the part.
	4. Diodes D1 through D6 on NB board are defective.	Check the voltages and replace the defective part.
	5. Disconnected or defective L1 or L2 on NB board.	Check the circuit.

## SECTION 3. MAINTENANCE AND ALIGNMENT

### 3-1. GENERAL INFORMATION

Refer to the operating manual for information on how to remove the transceiver's case.

**CAUTION:** DANGEROUS HIGH VOLTAGES ARE PRESENT WITHIN THE CASE OF THE TS-520 WHEN THE TRANSCEIVER IS TURNED ON. EXERCISE EXTREME CAUTION TO AVOID ELECTRIC SHOCK.

### 3-2. REPLACING THE RELAYS (See Figure 6.)

#### ANTENNA RELAY

RL2 is enclosed on the bottom of the final section. Remove the bottom of the TS-520's case and then remove the cover of the relay shield box as shown in Figure 6A. The standard relay has large contacts and the coil is rated at 300 ohms. Be sure to replace the relay with an exact equivalent.

#### VOX RELAY:

RL1 is located below the VOX board, as shown in Figure 6B, next to the power transformer. Remove the top cover

of the transceiver and then remove the VOX board. Replace the relay with an exact equivalent.

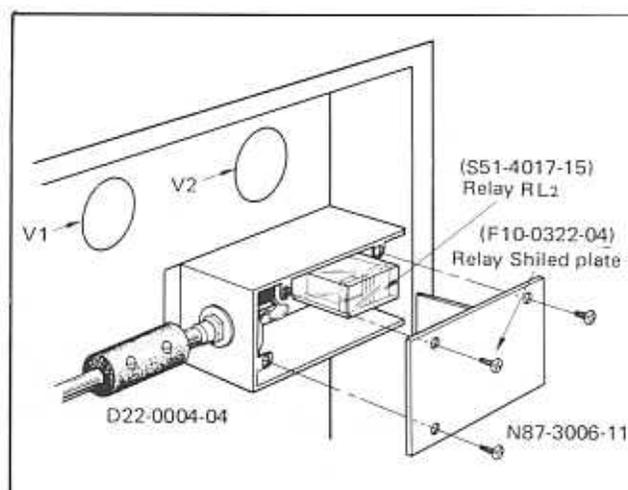

Figure 6A. Replacing the Antenna Relay.

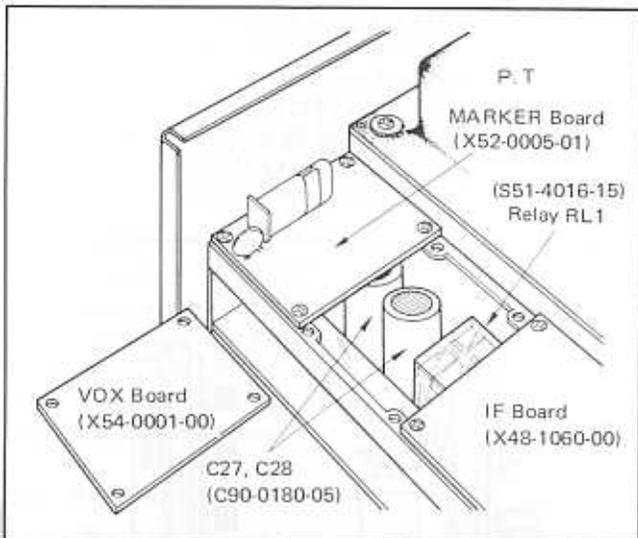

Figure 6B. Replacing the VOX Relay.

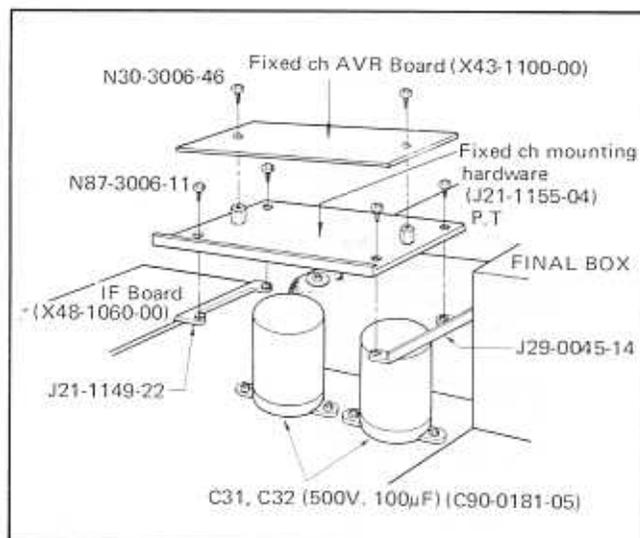

Figure 7A. Replacing C31 and C32

### 3.3. REPLACING THE ELECTROLYTIC POWER SUPPLY CAPACITORS

See Figure 7. C31 and C32 are reached by removing the TS-520's top cover and then the FIXCH-AVR board as shown in Figure 7A. C27 and C28 are reached by removing the transceiver's top case and then the MARKER and VOX boards as shown in Figure 7B.

### 3.4. DISASSEMBLY OF THE COIL PACK

When service is required on the RF board or on any of the coil boards the coil pack must be taken apart as shown in Figure 8. The assembly includes the RF board, the OSCILLATOR COIL board, the MIXER COIL board, the ANTENNA COIL board, and the DRIVER COIL board.

**PURPOSE:** To remove the RF section coil pack.

#### PROCEDURE:

1. Remove the top and bottom cover of the transceiver.
2. From the top, disconnect the lead between the square wrapping-terminal on the RF board and the COIL board to be removed.
3. Remove all of the front panel knobs and the front glass as shown in Figure 9.
4. Use a small hex nut driver to loosen the nuts at the front and/or back of the coil pack. The front nuts are reached through two holes in the front sub-panel on either side of the band switch. The front nuts must be loosened to remove the OSCILLATOR or MIXER COIL boards. The back nuts must be loosened to remove the ANTENNA or DRIVER coil boards.
5. The OSCILLATOR COIL board can be removed by pulling the screw bars towards the rear panel. For the other boards, pull the screw bars out towards the front panel.

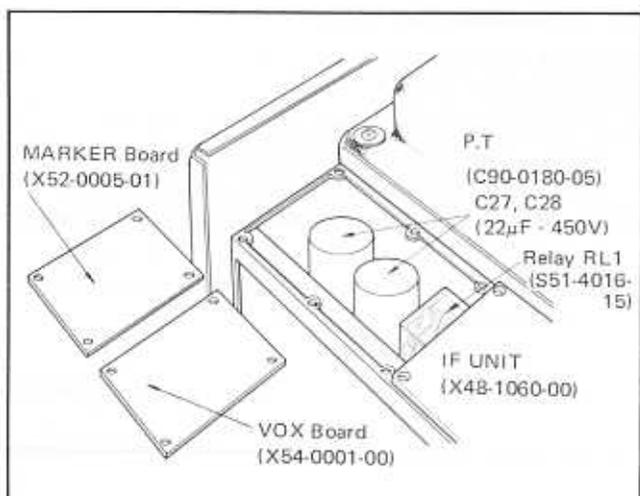

Figure 7B. Replacing C27 and C28

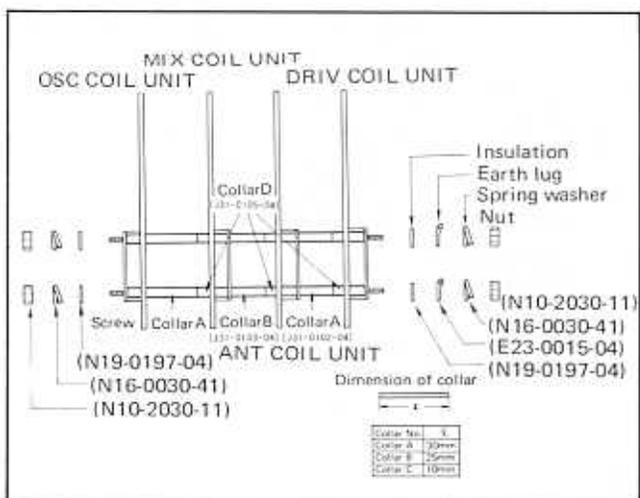

Figure 8. Coil Pack Assembly

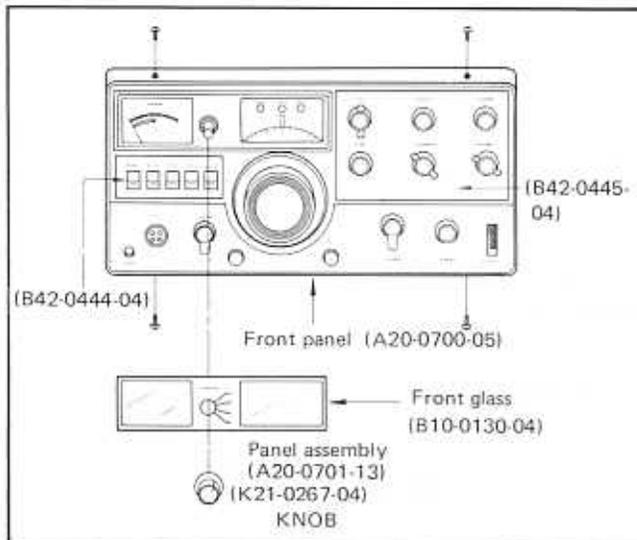

Figure 9. Removing the Front Panel

### 3-5. REMOVING THE VFO SECTION

**PURPOSE:** To remove the VFO assembly.

**PROCEDURE:**

1. Remove the front panel knobs, take off the transceiver's case, remove the front glass and pull off the front panel as shown in Figure 9.
2. Remove the FIXED CHANNEL-AVR board as shown in Figure 7A.
3. Unplug the VFO output coax and the 2-pin power plug from the rear of the VFO case.

4. Unscrew the four countersunk screws (two on the top and two on the bottom) which hold the VFO to the front sub-panel (see Figure 10).
5. Gently lift and pull the VFO assembly from the chassis being very careful not to damage the sub-dial. Figure 11 shows the entire assembly.

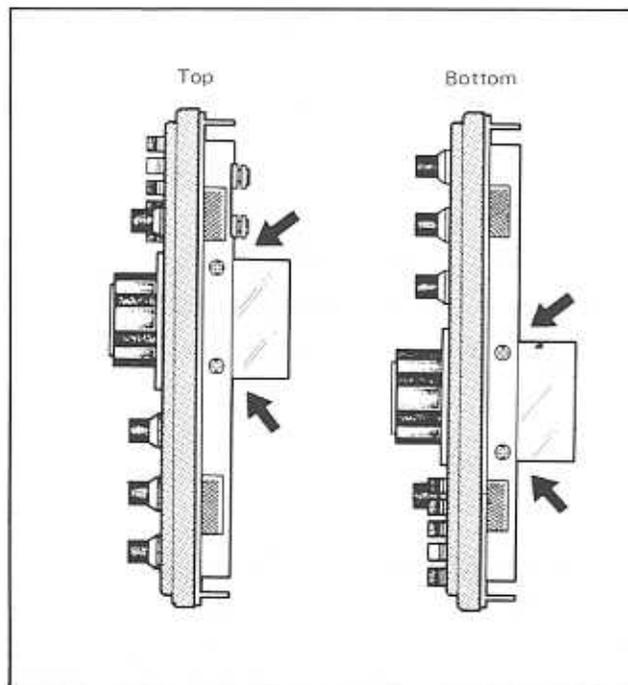

Figure 10. VFO Assembly Chassis Screws.

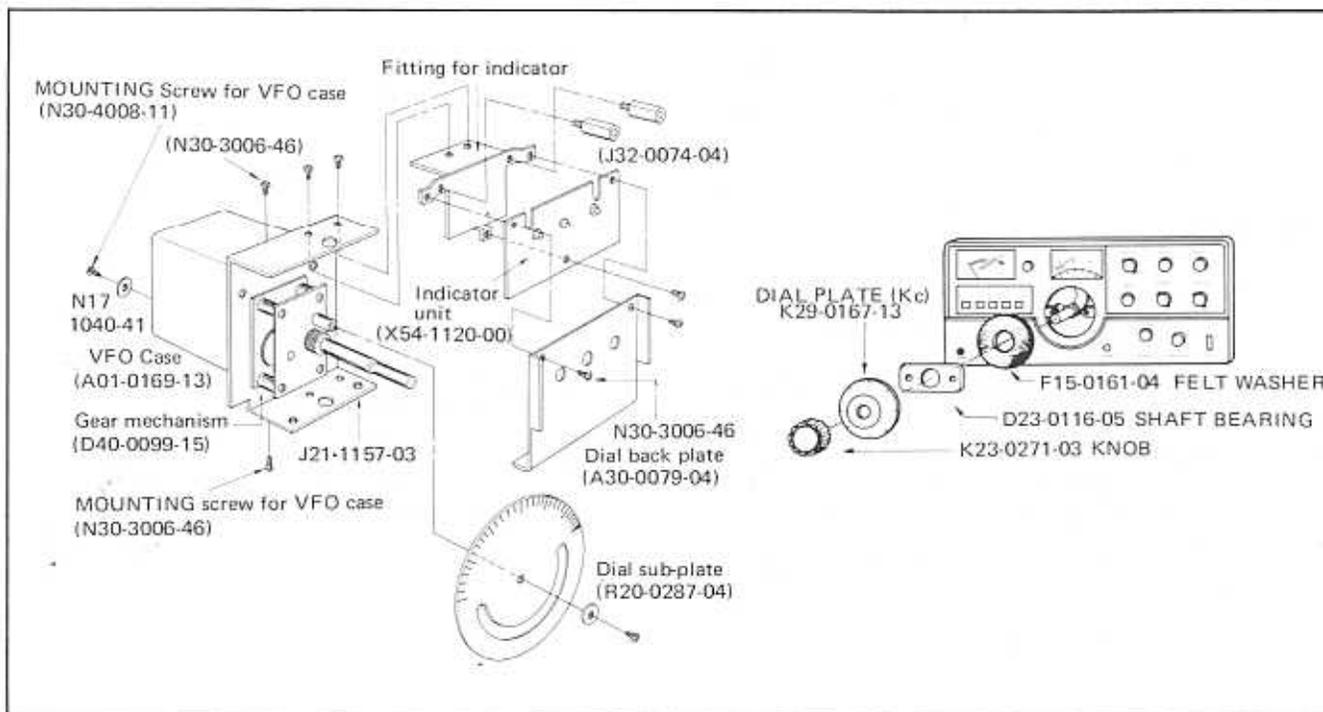

Figure 11. VFO Assembly

### 3-6. CHANGING THE PILOT LIGHTS

#### METER LIGHTS:

Remove the top cover of the transceiver. Remove the two countersunk screws holding the meter and light bracket to the top of the front sub-panel. Pull the meter back to gain access to the meter lights. Replace the light and refasten the bracket.

#### DIAL LIGHT:

Some early model TS-520's had no dial light. On later models the light can be replaced by removing the main tuning knob and the tuning dial. Reach in with long nose pliers to remove the bulb. After replacing the tuning dial, recalibrate the transceiver.

### 3-7. REPLACING THE METER

Remove the top cover of the transceiver. Remove the two countersunk screws holding the meter and light bracket to the top of the front sub-panel. Remove the six screws securing the IF board (behind the meter) and tilt the board up about 60° from its normal position. Lift the meter back and away being very careful not to scratch the meter face on the sub-panel.

### 3-8. CHANGING THE PADDLE SWITCHES

Remove the TS-520's case. Remove all the knobs from the front panel and then remove the front glass and front panel. Take out the meter, as described in Section 3-7. Pull the switch out towards the front of the transceiver while holding down the securing spring as shown in Figure 12.

Push in a new switch from the front. The switch will secure itself with a leaf spring. The paddle itself can be replaced by levering off the old paddle with a screwdriver. Then push on the new paddle.

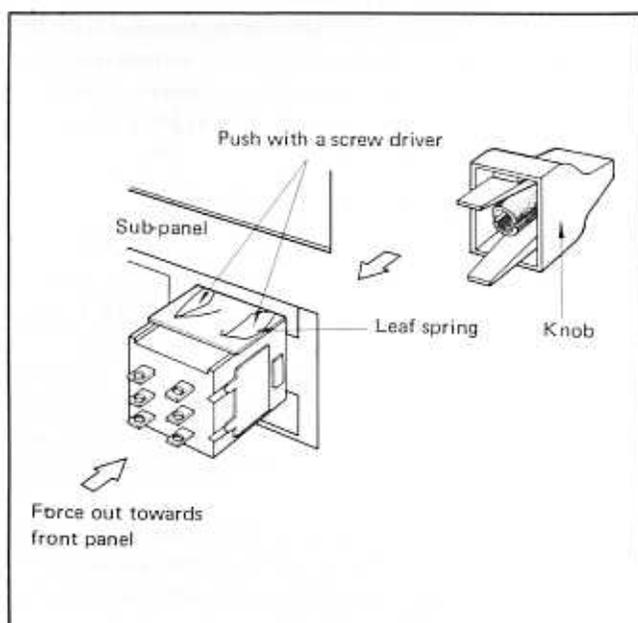

Figure 12. Replacing the Paddle Switches

### 3-9. LEVEL DIAGRAMS

#### RECEIVER SECTION:

Refer to Figure 13 for a level diagram of the receiver section to aid in service work. The following notes apply to that diagram.

#### NOTES:

1. Figure 13 shows a curve formed by plotting the signal generator output required for a constant audio output with a constant AF gain control setting. Set the AF gain control for a .63v/8 ohm audio output for a 0 db signal generator input at 14.175 MHz.
2. Measure the AF output at the ring detector on the GENERATOR board.
3. All voltage measurements are read from an RF VTVM.
4. To measure the output of the signal generator, connect a .01 mf, 500 volt capacitor between the signal generator and the voltmeter.

#### TRANSMITTER SECTION:

Refer to Figure 14 for a level diagram of the transmitter section. The following notes apply to the diagram.

#### NOTES:

1. The voltage measurements in Figure 14 are measured with an RF VTVM having an input capacitance of less than 3 pf.
2. All the voltages at and before the first grid of the final tubes are measured with the rear panel SG switch turned off.

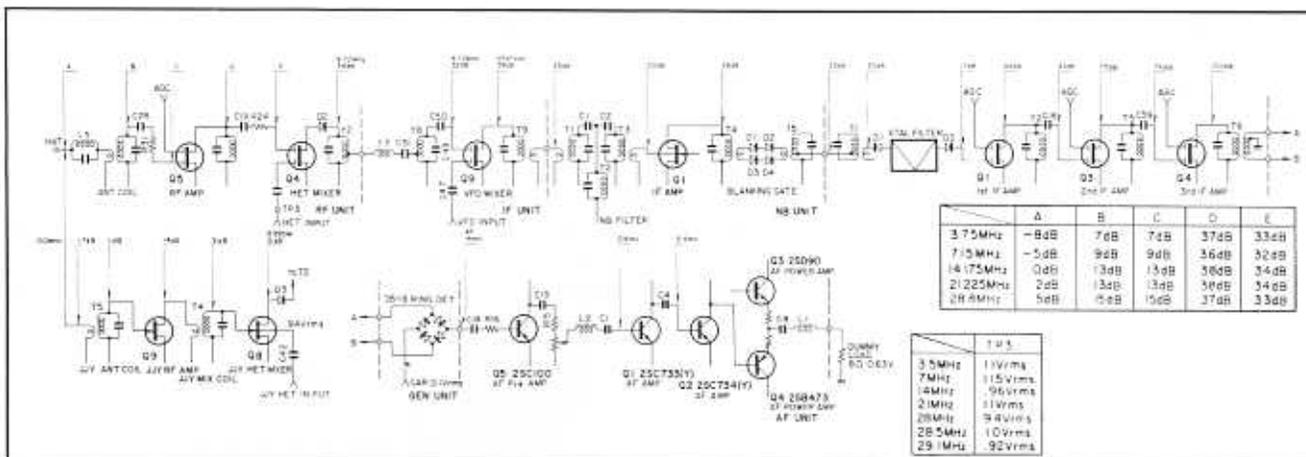

Figure 13. Receiver Section Level Diagram

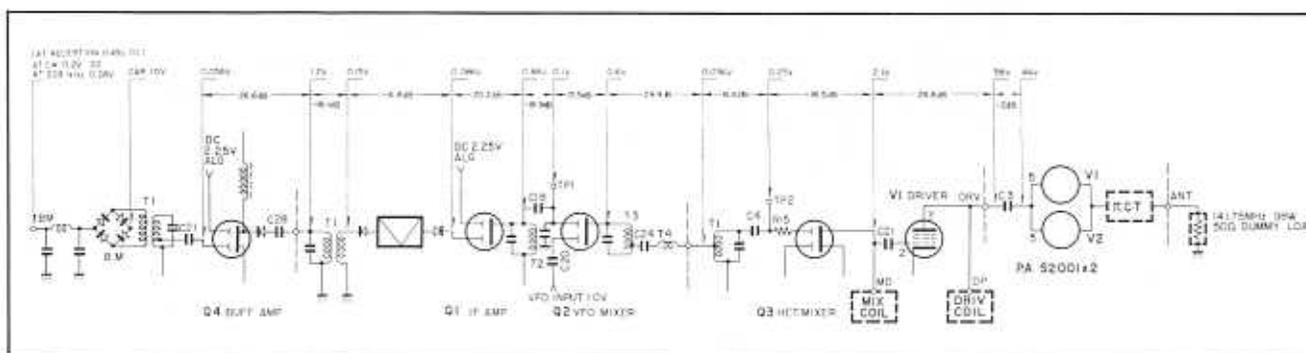

Figure 14. Transmitter Section Level Diagram

### 3-10. SERVICE INFORMATION

Be certain to see the operating manual for directions on removing the transceiver's case and information on the proper service position. Be certain that the air supply to the final tubes is not blocked.

#### INITIAL SWITCH SETTINGS:

LOCATION	SWITCH	POSITION
Front Panel:	MODE Switch	USB
	FUNCTION Switch	FIX
	RF Gain Control	Maximum
	H. SW Switch	OFF
	VOX Switch	MAN
	AGC Switch	FAST
	NB Switch	OFF
	JJY/WWV Switch	OFF
	RIT Switch	OFF
	Standby Switch	REC
	POWER Switch	ON
Rear Panel:	SG Switch	OFF
	EXT. SPEAKER Jack	8 ohm dummy load
	ANTENNA Connector	200 watt, 50 ohm dummy load

### 3-11. AVR ADJUSTMENT

**PURPOSE:** To adjust the output of the automatic voltage regulator board.

**TEST EQUIPMENT:** Voltmeter.

**PROCEDURE:** Connect the voltmeter to terminal 9 on the FIX. CH-AVR board. Adjust VR1 for a voltage reading of 9 volts  $\pm$  0.2 volts. Next connect the voltmeter to terminal 10 on the FIX. CH-AVR board. Adjust VR3 for a meter reading of 3.3 volts  $\pm$  0.1 volt.

### 3-12. BAND PASS FILTER ADJUSTMENT

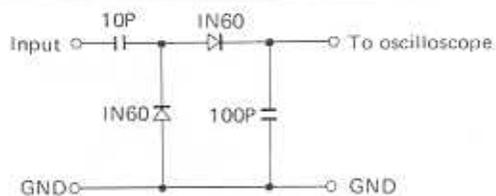

**PURPOSE:** To adjust the receive and transmit B.P.F.

**TEST EQUIPMENT:** A sweep signal generator (requiring frequencies at 8.295, 8.595, and 8.895 MHz), a B.P.F. wave detector (as shown in Figure 15), and an oscilloscope.

**PROCEDURE:** See Figure 16 for the test setup. After all of the connections described in Figure 16 have been made for the receiver adjustment, tune T2 on the RF board, and T7 and T8 on the IF board for the waveform shown in Figure 17.

Now make the connections for transmission as shown in Figure 16. Set the standby switch to SEND and adjust T1 and T4 on the IF board and T1 on the RF board for the waveform shown in Figure 17. Return the standby switch to REC.

**NOTE:** The FUNCTION switch is set to the FIX position to turn off the VFO. However if an accessory crystal is installed in the fixed channel oscillator, the waveform may be disturbed.

**NOTE:** The input to the wave detector must be connected to terminal TP by as short a cable as possible. If coax is used the measured waveform may be different because of the capacitive component of the coax.

Figure 15. B.P.F. Wave Detector

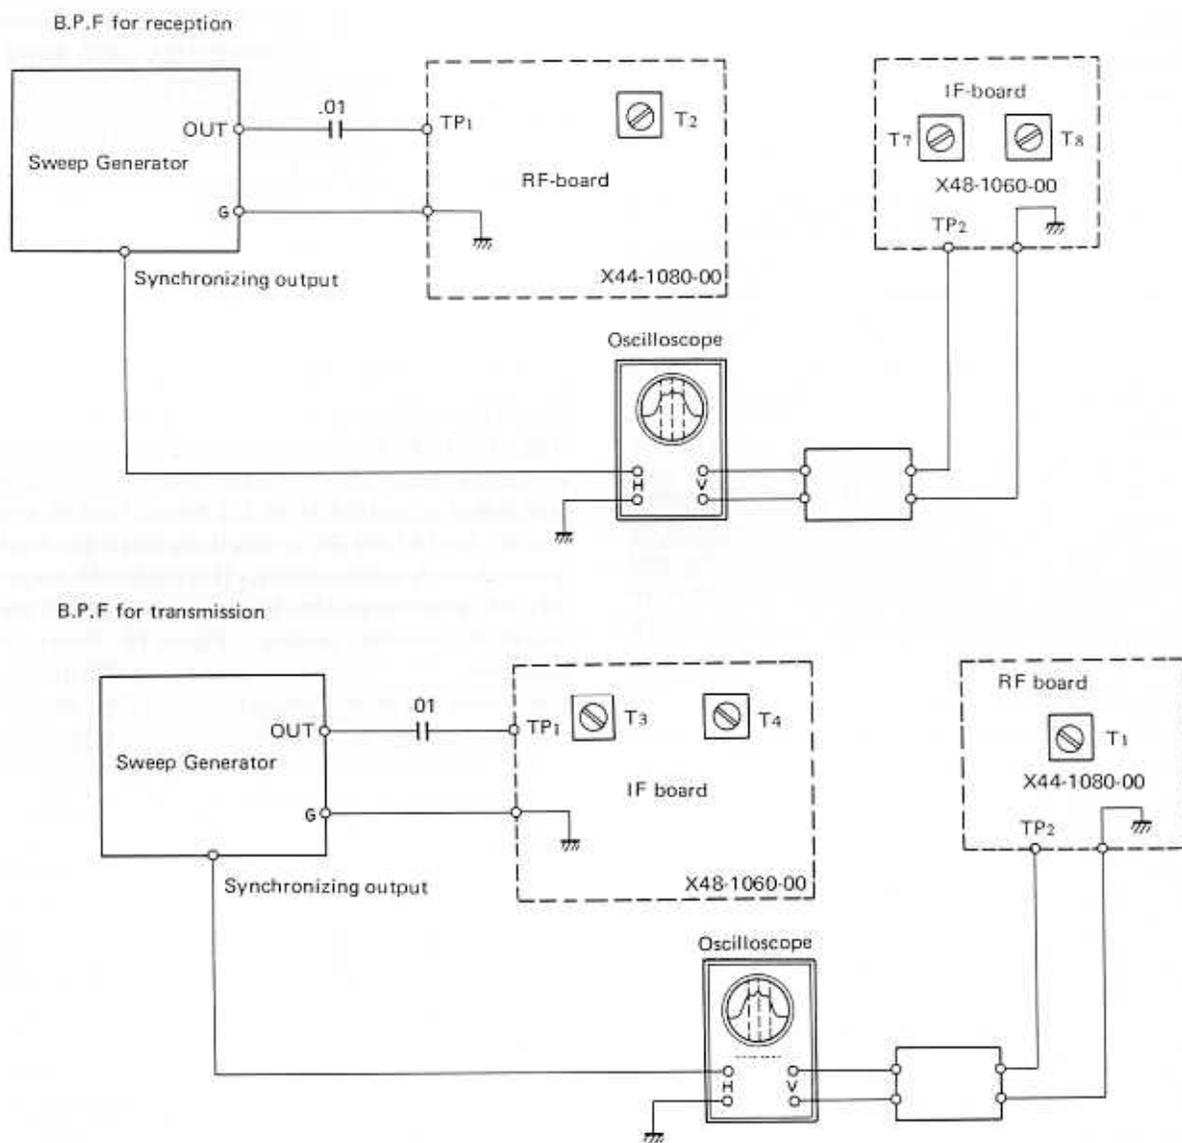

Figure 16. Band Pass Filter Test Circuit

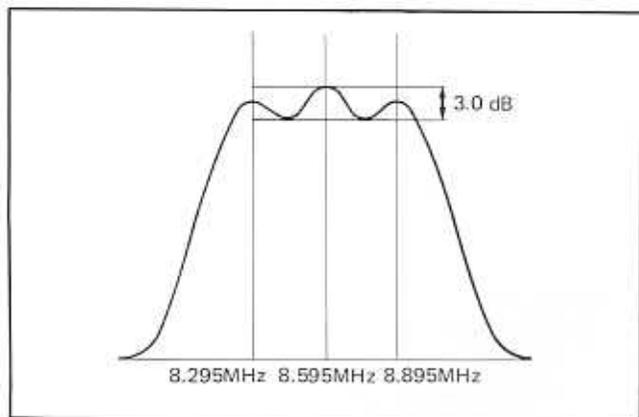

Figure 17. B.P.F. Waveform

### 3-12. CARRIER BOARD (X50-0009-01) ADJUSTMENT

**PURPOSE:** To adjust the output from the CARRIER board.

**TEST EQUIPMENT:** RF VTVM.

**PROCEDURE:** Connect the VTVM to terminal OUT on the CARRIER board. Set the FUNCTION switch to VFO and adjust T1 on the CARRIER board for a maximum voltage at the output.

**NOTE:** The carrier can not be adjusted when the FUNCTION switch is turned to CAL-FIX or CAL-RMT.

### 3-13. COIL PACK ALIGNMENT

**PURPOSE:** To align the OSCILLATOR, MIXER, ANTENNA, and DRIVER coils of the transceiver.

**TEST EQUIPMENT:** An RF VTVM and a signal generator.

**PROCEDURE:**

**HETERODYNE OSCILLATOR COILS:**

Connect the RF VTVM to terminal TP3 on the RF board. For the 3.5 MHz band adjust the 3.5 MHz oscillator coil for a maximum reading on the VTVM. Then turn the core counterclockwise for a voltage reading 1 db lower than the maximum. Repeat the same procedure for the 7, 14, 21, and 28.5 MHz bands.

**ANTENNA AND MIXER COILS:**

Set the FUNCTION switch to VFO, remove the VTVM, and connect the signal generator to the ANTENNA connector. Turn the DRIVE control to the 12 o'clock position. Table 1 below describes the adjustment order and frequencies for this alignment. Receive the signal generator output at the designated frequency and carefully adjust the appropriate ANTENNA then MIXER coil for a maximum S-meter reading. The signal generator output should start at 60 db and be reduced as the circuit sensitivity increases.

**NOTE:** The coil cores are fragile. Tune them carefully from straight above. Be certain to tune the correct coil for each band.

**DRIVER COILS:**

Turn the H.SW switch to ON, turn the MODE switch to CW, set the METER switch to ALC, adjust the CAR control

to maximum, and set the standby switch to SEND. The switch should be OFF whenever the signal generator is connected to the transceiver. Adjust each coil, in the order of and at the frequencies described in Table 1, for maximum ALC deflection. Reduce the CAR control as necessary.

TABLE 1. ANTENNA, MIXER, and DRIVER Coil Adjustment

ORDER	BAND	FREQUENCY
1	3.5	3.750 MHz
2	28.5	28.800 MHz
3	21.0	21.225 MHz
4	14.0	14.175 MHz
5	7.0	7.150 MHz

### 3-14. WWV CIRCUIT ALIGNMENT

**PURPOSE:** To align the WWV circuit for maximum sensitivity.

**TEST EQUIPMENT:** Signal Generator.

**PROCEDURE:** Insert a 10 MHz, 60 db signal into the ANTENNA connector and push the WWV switch on. Set the main tuning dial to zero to receive the signal. Adjust coils T4 and T5 on the RF board for a maximum S-meter reading. Reduce the signal input as necessary. Adjust coil T3 for a maximum S-meter reading and then turn the core 1/4 turn counterclockwise.

### 3-15. IF TRANSFORMER ADJUSTMENT

**PURPOSE:** IF board and NB board alignment.

**TEST EQUIPMENT:** A signal generator and a voltmeter.

**PROCEDURE:** Insert a 40 db signal into the transceiver and receive it on USB at 14.175 MHz. Tune IF transformers T2, T5, T6, and T9 on the IF board (X48-1060-00) for a maximum S-meter reading. Then adjust IF transformers T1, T2, and T3 on the NB board (X54-1080-10) for a maximum S-meter reading. Figure 19 shows the coil locations.

Disconnect the coax from terminal OUT on the NB board and insert a 47 pf capacitor (as shown in Figure 18). Adjust T1 on the IF board and T4 and T5 on the NB board alternately for a maximum S-meter reading. Remove the capacitor and reconnect the coax.

**NOTE:** Always repeat the adjustments several times because the coils affect each other.

Set the signal generator to 60 db and connect a voltmeter to the collector of Q6 on the NB board. Adjust NB IF coils T6 and T7 to minimize the voltage at the collector of Q6.

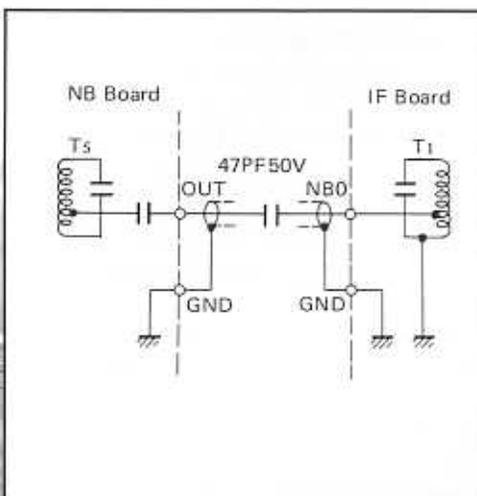

Figure 18. IF Transformer Test Circuit

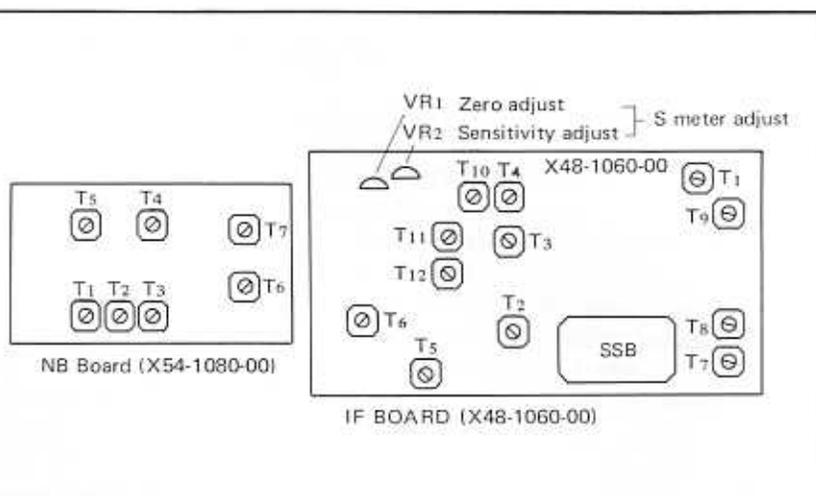

Figure 19. IF Transformer Adjustment Diagram

### 3-16. TRAP COIL ADJUSTMENT

**PURPOSE:** To align the trap coils.

**TEST EQUIPMENT:** Signal generator, an AF VTVM, and an 8 ohm dummy load.

**PROCEDURE:** Set the BAND switch to 7 MHz and insert an 8.895 MHz signal (70 db) at the ANTENNA connector. Tune the receiver to 7.0 MHz and adjust L11 on the RF board (X44-1080-00) for a minimum S-meter reading.

Set the signal generator to 8.395 MHz and tune the receiver to 7.5 MHz. Adjust L5 on the RF board to minimize the S-meter reading.

Turn the BAND switch to 3.5, turn the receiver to 3.7 MHz and adjust the DRIVE control for maximum sensitivity. Connect an AF VTVM and an 8 ohm dummy load to the EXT. SPEAKER jack of the TS-520. Insert a 3.736 MHz signal from the signal generator to the ANTENNA connector, tune it in on the VFO, and adjust trap coil L2 on the RF board for a minimum voltage reading on the AF VTVM.

### 3-17. CARRIER BALANCE

**PURPOSE:** To adjust the carrier balance.

**TEST EQUIPMENT:** A Signal generator, an 8 ohm dummy load, and an AF VTVM.

**PROCEDURE:** Tune the TS-520 to receive the signal generator input (20 db) at 14.175 MHz and adjust the DRIVE control for maximum sensitivity. Connect the AF VTVM and an 8 ohm dummy load to the EXT. SPEAKER jack. Adjust TC2 and VR3 (on the GENERATOR board) alternately for maximum voltage on the AF VTVM.

### 3-18. S-METER ADJUSTMENT

**PURPOSE:** To adjust the S-meter zero and sensitivity.

**TEST EQUIPMENT:** Signal generator.

**PROCEDURE:** Turn the RF gain control fully clockwise, receive the signal generator input at 14.175 MHz (40 db), and tune the DRIVE control for maximum sensitivity.

With no signal, adjust VR1 on the IF board (X48-1060-00) to zero the S-meter. Then with a 40 db signal to the ANTENNA connector at 14.175 MHz, adjust VR2 on the IF board for an S9 meter reading.

### 3-19. RIT ADJUSTMENT

**PURPOSE:** To adjust the RIT zero to the VFO frequency.

**TEST EQUIPMENT:** None required.

**PROCEDURE:** Set the RIT control to zero and push the RIT switch on. Turn the FUNCTION switch to CAL-25 KHz and receive a calibrator signal at any frequency. Adjust the VFO to receive the calibrator signal as a 1000 Hz tone.

Push the RIT switch off and adjust VR2 on the FIXED CH.-AVR board (X43-1100-00) for the same 1000 Hz tone established with the RIT on. Switch the RIT on and off several times to be certain that the two tones are identical.

### 3-20. CALIBRATOR FREQUENCY ADJUSTMENT

**PURPOSE:** To adjust the frequency of the built-in crystal calibrating circuit.

**TEST EQUIPMENT:** A frequency counter (or alternately use WWV as a frequency standard).

**PROCEDURE:** Connect a frequency counter to terminal MO of the MARKER board. Set the FUNCTION switch to CAL-25 KHz and adjust TC1 on the MARKER board for a frequency counter reading of an even 25 KHz ( $\pm 2$  Hz).

Alternately, connect an antenna to the transceiver and receive WWV at 10 MHz. Set the FUNCTION switch to CAL-25 KHz to turn on the calibrator. Adjust TC1, as above, to bring the calibrator; and WWV into a single beat note.

### 3-21. VFO ADJUSTMENT

**PURPOSE:** To adjust the frequency and output of the VFO circuit.

**TEST EQUIPMENT:** An RF VTVM and a frequency counter.

**PROCEDURE:** Set the FUNCTION switch to VFO and connect a frequency counter to terminal VFO on the IF board (X48-1060-00). With the VFO tuned to zero the frequency counter should read 5.5 MHz. If the frequency is not correct, adjust TC1 (inside the VFO section) as shown in Figure 20 for a correct frequency output. Tune the VFO to the 600 marking and check that the frequency counter shows 4.9 MHz. If the frequency is incorrect, adjust L1 in the VFO section for a proper frequency. Repeat the adjustment of TC1 and L1 alternately several times to insure proper operation.

To adjust the VFO output, set the VFO to 300, connect an RF VTVM to terminal V on the IF board, and adjust TC2 in the VFO section for a 0.9 volt reading.

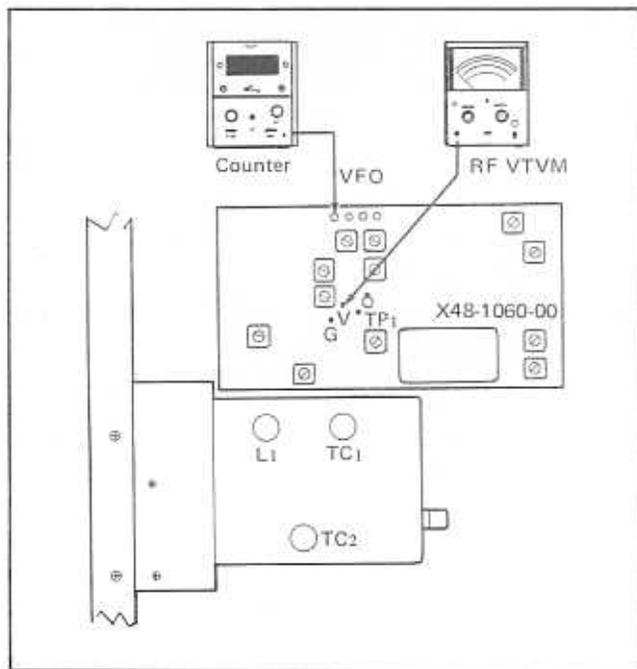

Figure 20. VFO Adjustment Diagram.

### 3-22. BIAS ADJUSTMENT

See the operating manual for instructions on setting the bias current to 60 ma. The bias requires readjustment if the AC line voltage is changed.

### 3-23. GENERATOR BOARD IF TRANSFORMER ADJUSTMENT

**PURPOSE:** To adjust the IF transformers on the GENERATOR board.

**TEST EQUIPMENT:** A 100 watt dummy load.

**PROCEDURE:** Slide the SG switch to off, turn the MODE switch to CW, set the METER switch to ALC, and

turn the CAR control fully clockwise. Tune the transmitter section at 14.175 MHz into the dummy load. Turn the DRIVE control to about 12 o'clock. Set the standby switch to SEND and adjust T1 on the GENERATOR board for a maximum ALC meter reading. Reduce the CAR control as necessary.

### 3-24. RF METER ADJUSTMENT

**PURPOSE:** To align the RF output meter reading and verify the RF output level.

**TEST EQUIPMENT:** A 200 watt, 50 ohm RF dummy load, and a 200 watt, 3-30 MHz accurate RF wattmeter.

**PROCEDURE:** Tune the TS-520 for operation at 14.175 MHz into a dummy load through a wattmeter with the SG switch on. Set the meter switch to ALC and turn the CAR control to about 12 o'clock. With the MODE switch at TUN, transmit at 14.175 MHz and adjust the DRIVE control for a maximum ALC meter reading. Turn the METER switch to IP and tune the PLATE control to minimize the meter reading. Set the MODE switch to CW, turn the METER switch to RF, and tune the PLATE and LOAD controls alternately for maximum output power as indicated on the wattmeter. After the transceiver is tuned, adjust the side panel RF VOLT control for an RF meter reading of about 200 ma (on the IP scale). The RF meter position does not have a separate scale. Return the standby switch to REC.

Tune the TS-520 now for maximum CW output with the SG switch on. Check the power output at 3.75 MHz, 7.15 MHz, 14.175 MHz, 21.225 MHz, 28.3 MHz, 28.8 MHz and 29.4 MHz. Verify with the wattmeter on each band that the output power meets specifications.

### 3-25. FINAL SECTION NEUTRALIZATION

**PURPOSE:** The TS-520 does not require matched final tubes, however when new finals are installed in the transceiver the final section must be reneutralized.

**TEST EQUIPMENT:** An RF VTVM and a dummy load.

**PROCEDURE:** Tune the TS-520 for maximum output CW at 21.3 MHz with the SG switch on. Set the standby switch to REC and slide the SG switch off. Connect the RF VTVM to the ANTENNA connector along with the dummy load, and flip the standby switch to SEND. With an insulated tuning tool, tune TC1 in the final section for a minimum reading on the VTVM.

### 3-26. BALANCED MODULATOR AND CARRIER ADJUSTMENT

**PURPOSE:** To adjust the balanced modulator and carrier.

**TEST EQUIPMENT:** An RF wattmeter, an AF VTVM, an AF signal generator, an RF VTVM, and a frequency counter, and a dummy load.

**PROCEDURE:** Tune the TS-520 for maximum CW output at 14.175 MHz through the wattmeter into a dummy load. Set the MODE switch to LSB, connect an RF VTVM to the ANTENNA connector and adjust TC1 and VR2 alternately

on the GENERATOR board for a minimum reading on the RF VTVM. Switch the MODE switch to USB and readjust TC1 and VR2 for an RF VTVM reading equal to the reading for LSB.

Disconnect the RF VTVM, set the MODE switch to LSB, and insert a 1500 Hz (5 mv) signal at the MIC connector.

Adjust the MIC control for an output power of 50 watts.

Switch the AF input to 400 Hz and, if necessary, adjust TC3 (on the CARRIER board) for an output power within 5 watts of the output for 1500 Hz. Switch the AF input to 2600 Hz and, if necessary, adjust TC3 for an output power within 5 watts of the output power for 1500 Hz.

Turn off the rear panel SG switch and connect a frequency counter to terminal OUT on the CARRIER board and set

the MODE switch to CW. Set the standby switch to SEND and adjust TC1 on the CARRIER board to obtain an oscillator frequency of 3.395 MHz.

### 3-27. SIDETONE OUTPUT ADJUSTMENT

**PURPOSE:** To adjust the volume of the CW sidetone output to the speaker.

**TEST EQUIPMENT:** An AF VTVM and a telegraph key.

**PROCEDURE:** Slide the SG switch off and connect the key to the TS-520. Set the MODE switch to CW and the AF gain control to about 12 o'clock. Connect the AF VTVM to the EXT. SPEAKER jack, key the transceiver, and adjust VR2 on the AF board for a reading of about 50 mW (0.63 V/8 ohms).

# PARTS LIST

## PARTS LIST OF TS-520 (Y54-1110-00)

Circuit No.	Parts No.	Description
<b>CAPACITOR</b>		
	C03-0060-05	Variable capacitor (A) (FINAL)
	C01-0084-05	Variable capacitor (B) (LOAD)

# VFO-520

## EXTERNAL VIEW

## SPECIFICATION

### FREQUENCY RANGE:

80 meter band	3.5 to 4.0 MHz.
40 meter band	7.0 to 7.5 MHz.
20 meter band	14.0 to 14.5 MHz.
15 meter band	21.0 to 21.5 MHz.
10 meter band	A 28.0 to 28.5 MHz.
	B 28.5 to 29.1 MHz.
	C 29.1 to 29.7 MHz.

### OSCILLATION FREQUENCY:

4.9 to 5.5 MHz.

### OSCILLATION CIRCUIT:

VFO: Clapp Oscillator.

### OUTPUT VOLTAGE:

1 volt  $\pm 3$  db (across a 470 ohm load).

### FREQUENCY STABILITY:

Within  $\pm 100$  Hz per 30 minutes after 3 minutes of warm-up

### SOLID STATE COMPLEMENT:

2 transistors.  
 2 FET's  
 6 diodes.

### POWER REQUIREMENTS:

The VFO-520 receives power from the TS-520.  
 12.6 VAC, 80 ma. 12.6 VDC, 40 ma. 9.0 VDC, 25 ma.

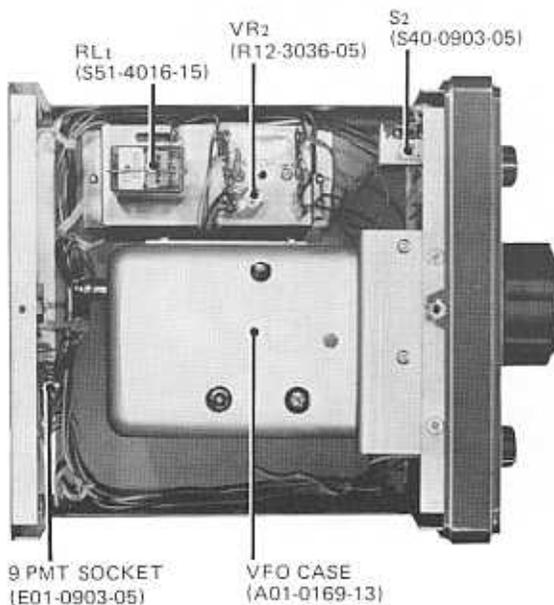

### DIMENSIONS:

6.5" wide x 5.9" high x 7.5" (excluding feet).

### WEIGHT:

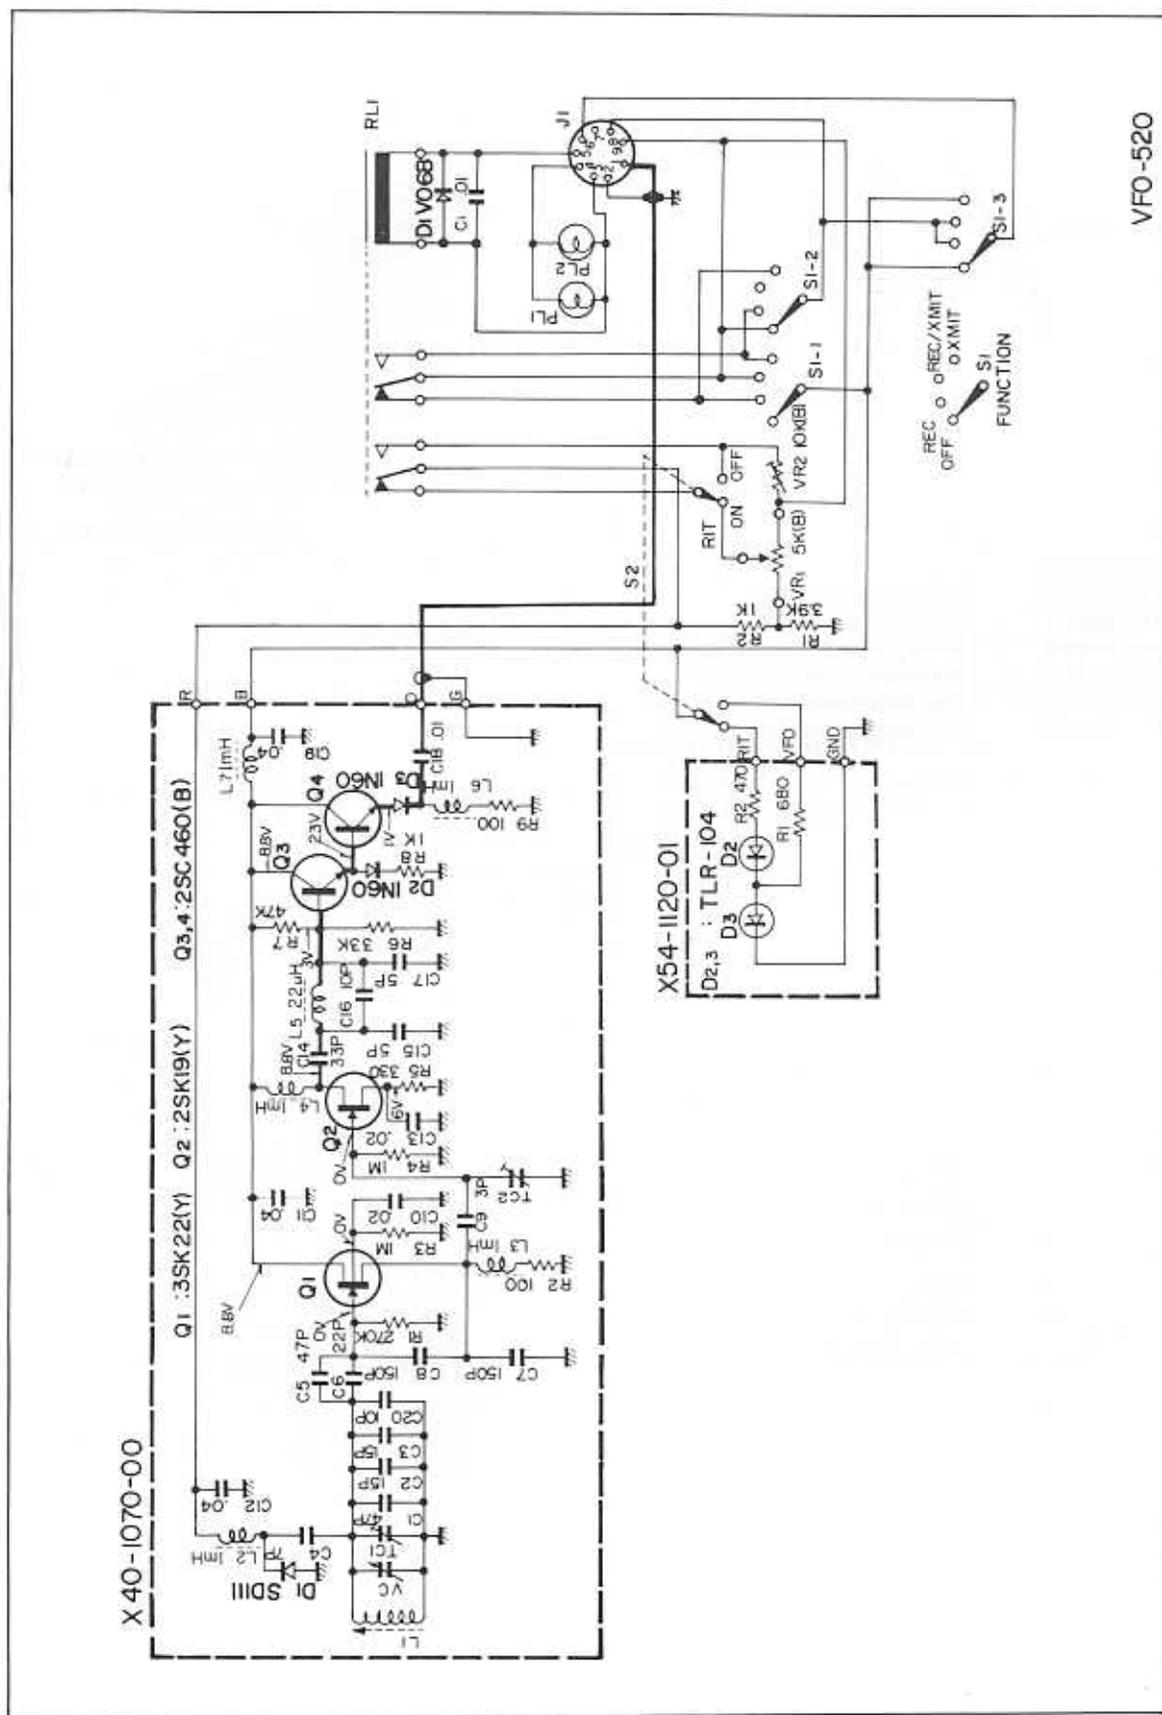

6.6 lbs. (shipping weight 8.36 lbs.)

## EXTERNAL VIEW

## SPECIFICATION

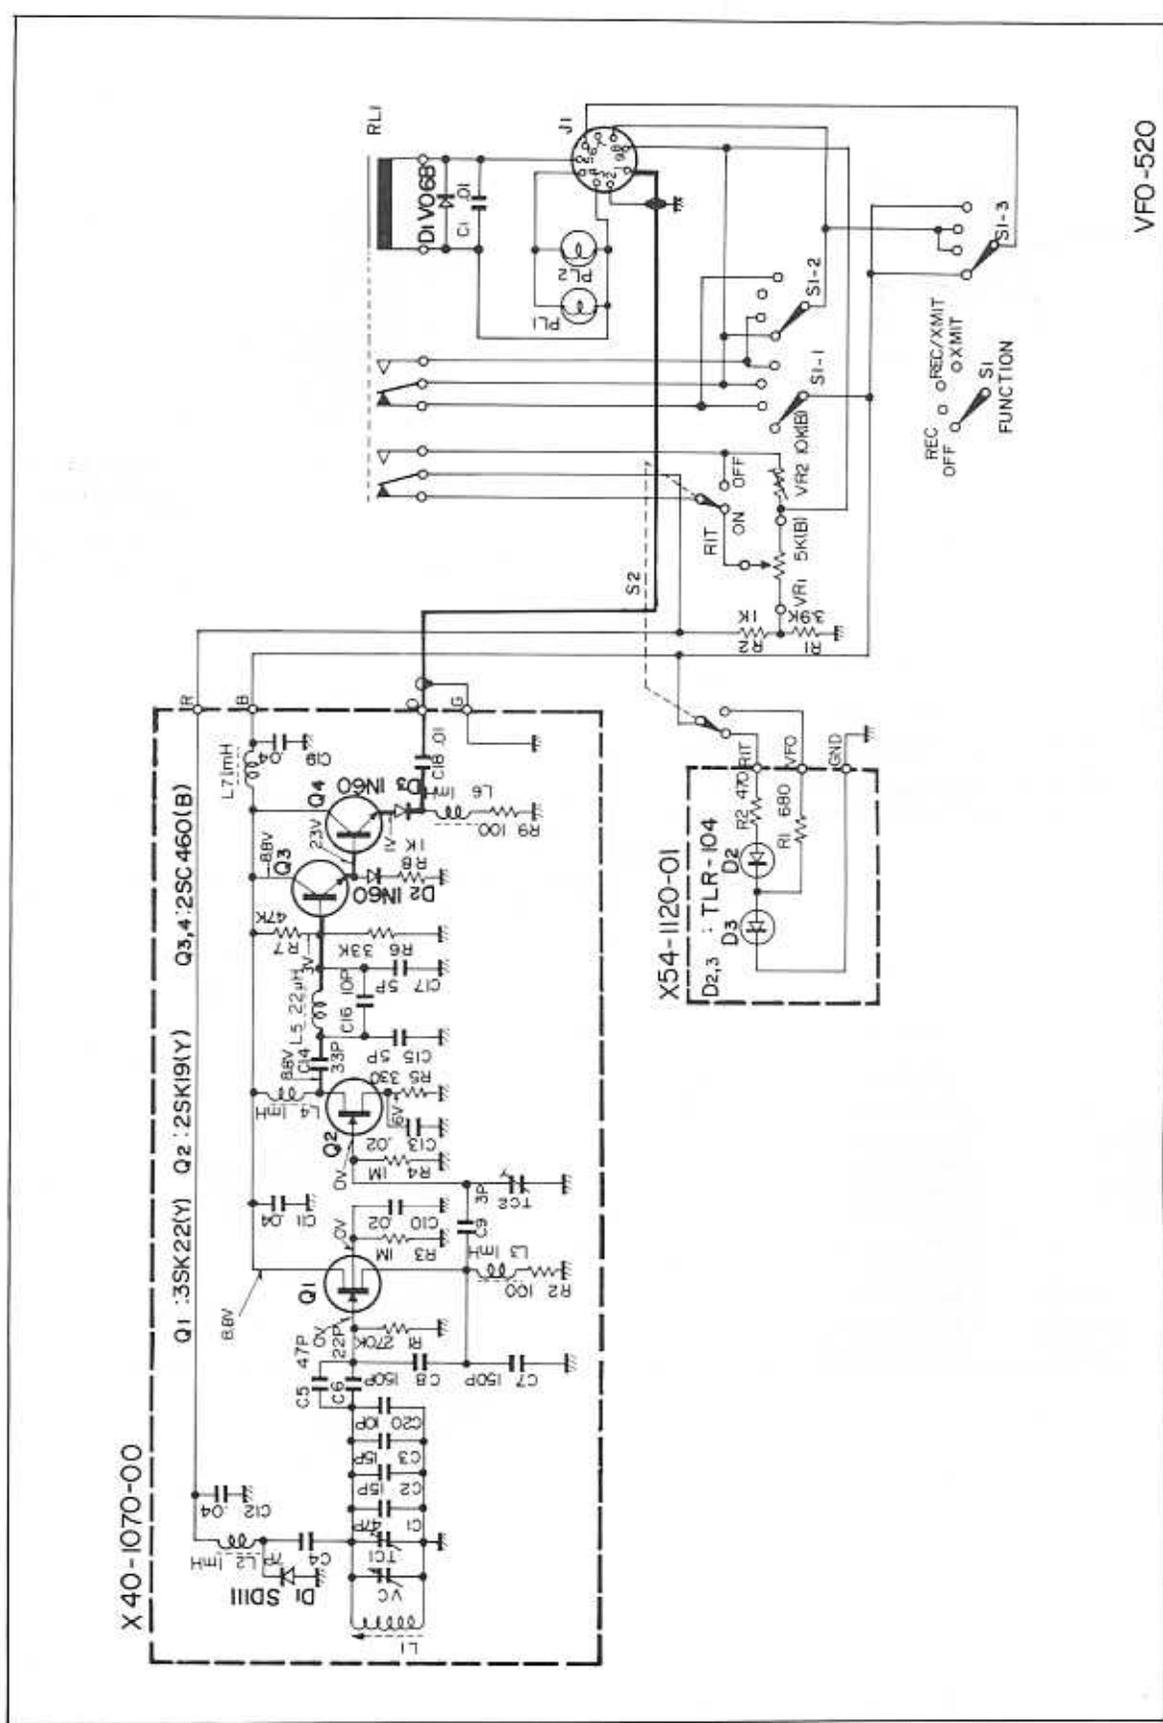

Speaker size	4.75"
Maximum input	2 watts
Impedance	8 ohms
Frequency response	100 Hz to 5 kHz
Dimensions	6.5" wide x 6.0" high x 7.5" deep (excluding feet)
Weight	3.0 lbs. 5.28 lbs. (shipping weight)

## PARTS LISTS OF SP-520 (Y59-1000-00)

Circuit No.	Parts No.	Description
<b>MISCELLANEOUS</b>		
—	A01-0221-12	Case
—	A20-0721-04	Panel
—	A22-0142-13	Sub panel
—	A47-0007-04	Rear plate
—	B01-0078-23	Escutcheon
—	B05-0205-04	Speaker net
—	B43-0198-04	Badge (England)
—	B43-0201-04	Badge (U.S.A., Europe)
—	B42-0009-04	Passed sticker
